

Caution: Photovoltaic system performance predictions calculated by PVMatts® include many inherent assumptions and uncertainties and do not reflect variations between PV technologies nor site-specific characteristics except as represented by PVWatts® inputs. For example, PV modules with better performance are not differentiated within PVWatts® from lesser performing modules. Both NREL and private companies provide more sophisticated PV modeling tools (such as the System Advisor Model at http://sam.nrel.gov) that allow for more precise and complex modeling of PV systems.

PV System Specifications (Commercial)

DC System Size	162 kW
Module Type	Standard
Array Type	Fixed (roof mount)
Array Tilt	20°
Array Azimuth	225°
System Losses	14%
Inverter Efficiency	96%

Initial Economic Comparison

Average Cost of Electricity Purchased from Utility	0.09 \$/kWh
Initial Cost	3.50 \$/Wdc
Cost of Electricity Generated by System	0.16 \$/kWh

These values can be compared to get an idea of the cost-effectiveness of this system. However, system costs, system financing options (including 3rd party ownership) and complex utility rates can significantly change the relative value of the PV system.
